## Open Spatial Australia Major Sponsors of GITA 2008

**SYDNEY, Aust., July 23, 2008** — Open Spatial Australia is proud to be the Major Sponsor of GITA 2008. Over the past seven (7) years Open Spatial Australia has supported the GITA organisation in various workshops and national events and this year's event is building up to be the premier spatial event of the year.

In conjunction with our partners Munsys Technologies and 1Spatial, Open Spatial staff will be available to deliver one-on-one presentations of these solutions to interested delegates.

A point of difference that Open Spatial brings to the Australasian marketplace is a focus and emphasis on spatial data quality and the spatial enablement of existing corporate data.

Proactive spatial Data Managers of Utilities and Local Authorities have identified with the premier spatial data capture application **Munsys** to assure the quality of their spatial data at point of entry, whilst using **Enlighten** to spatially enable their corporate data and corporate applications to act as an Asset Decision Support System for managing the infrastructure assets.

Open Spatial continues to deliver innovative solutions that assist Data Managers with inaccurate legacy spatial data that requires cleansing and/or linear and planar connectivity. The **Radius** suite of products will introduce a 'set and forget' approach to manage those objectives, directly in the database.

Representatives from Barwon Regional Water Authority will be delivering a paper at the Conference on how they have used the Open Spatial solution to improve their geospatial services. Victorian Water Businesses are renowned for delivering smart solutions that continually improve the provision of services to their communities. The Open Spatial offering is the fastest growing CAD to GIS solution across Victorian Water Utilities.

Anthony Jahshan, Managing Director at Open Spatial Australia Pty Ltd. said: *"Open Spatial continues to lead by delivering solutions that are based on Generally Accepted Best Practices and that are compliant with the Open Geospatial Consortium standards. We are proud to be associated with the GITA Organisation and to be their Gold Sponsors for GITA 2008"*.

### About Open Spatial

Open Spatial Australia Pty Ltd is an Australian company delivering geospatial solutions based on Oracle and Autodesk technologies throughout the Asia Pacific region. Recognised for delivering applications to Government and Utilities sectors throughout the region, all of our solutions are based on internationally accepted open standards and world-class best practices. Open Spatial offers innovative spatial infrastructure solutions to managing spatial data from Survey through to Design, Construction and Ongoing Spatial Data Management.
