Product Announcement

IN BRIEF

- ▶ Plot Applications - Faxing
- ▶ Plotting - 3rd Party API Licensing Notes

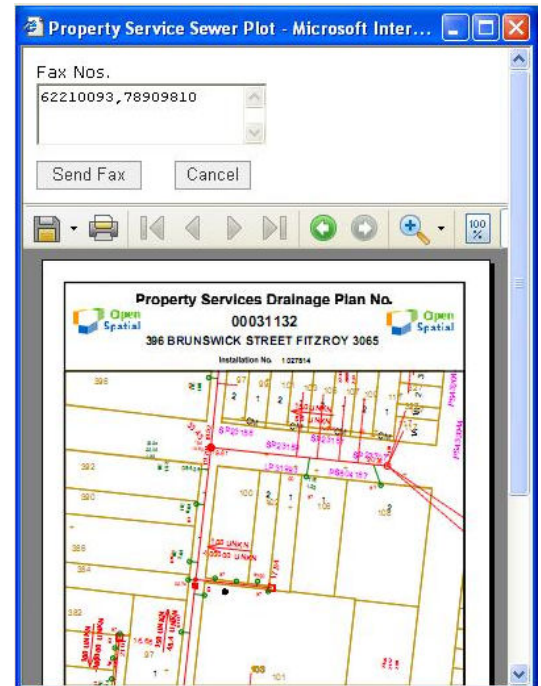

PLOT APPLICATIONS - FAXING

Plot Applications has been improved to provide the ability to fax to one or more fax numbers directly from the plot preview screen. The new fax functionality is configurable for selected plots and to your corporate backend faxing solution.

The Plot Template defines the plot faxing capability allowing only certain plots to be faxed automatically. The header screen shown is displayed at the time of a print preview, to optionally allow the change of the Fax No. or cancelling the fax request.

Plot Faxing supports an Open Source fax interface⁽¹⁾ and an email capability into your corporate Fax Server.

Licensing of the Fax functionality is included for customers that are subscribed to Enlighten 2008—Plotting 3rd Party API. For more information contact info@openspatial.com.au

PLOTTING - 3RD PARTY API LICENSING

The 3rd Party API enables high quality plot requests from any 3rd Party Corporate Application.

Licensing of the 3rd Party API is limited to applications within your corporate Intranet. Internet Public Access Licensing is available - contact your account manager or info@openspatial.com.au to discuss licensing.

¹Plot Faxing is compatible with the Open Source Software "BLAT". Follow this link for more details <http://ostatic.com/5766-software-opensource/blat>
